

## Dirtwhacker Conveyor Belt Cleaner

Rojan, as agent for **Technique Avant Garde, South Africa**, offer the latest in the conveyor belt cleaning system, the Dirtwhacker.

To achieve optimum belt cleaning, the following conditions are required:

- the angle between the blade and belt must be at 90°
- each blade should operate under equal pressure
- the scraper system could operate on all belts including those with mechanical clips

As well as implied conditions such as not damaging the belt, in the event of failure to be fail safe, and to minimize maintenance.

The Dirtwhacker's unique parallelogram design ensures that the blade is always held at 90° to the belt. Its internal bladder ensures every blade on the rack is held at the set pressure. The system automatically compensates for blade wear. The constant blade-to-belt angle and even blade-to-belt pressure over the full belt width are unique features of the design.

It is so effective in the majority of installations that pre-cleaning by a primary cleaner is not required.

The current sizes and accessories we are able to provide are:

- DW0600
- DW0750
- DW0900
- DW1050
- DW1200
- DW1500
- DW1950

Custom designed Dirtwhackers can also be manufactured in stainless steel for corrosive environments.
