

Fired Refractory Shapes

Rojan is able to manufacture Fired Refractory Shapes of various designs such as:

- crucibles
- tundishes
- launders
- furnace spouts
- samplers
- ladle liners
- splash blocks
- saggars

Dependant on your application, we can select the material and method best suited to produce your product to your specification. The materials used include:

- High Density Alumina
- Silicon Carbide
- Fused Silica
- Zirconia
- Mullite

Our products exhibit the following properties:

- Superior hot strength
- Excellent chemical attack resistance
- Excellent thermal shock resistance
- Low gas permeability
- Tight tolerance capability

We can make other shapes and sizes to suit your application.
