Ceramic Grinding Media

Rojan, as agent for Hira Ceramics Co. Ltd, Japan, offer the latest in quality ceramic grinding media.

Hira Ceramics Co. Ltd. has manufactured high quality ceramic grinding media for over 30 years. It has 2 factories in Japan, occupying 35,000 sqm of land. Its philosophy is to be the best grinding media manufacturer in the world and to achieve this it constantly improves its product quality, size, grade and delivery service to suit its customers' applications.

ceramic grinding media are particularly suited for Tower Mills, Ball Mills and IsaMills™. The media are available in a range of sizes, from 0.1 mm to 60 mm, thereby offering operators flexibility in terms of feed sizes to their mills.

We can offer different material grades to suit your applications. The ceramic grinding media are packed in quality packaging material and are available in standard 25 kg or 500 kg bags or in steel drums of any quantity to suit your needs.

The Rojan Hira ceramic grinding media have proven to be very effective as our media are inert (no chemical attack), have a low wear rate, uniform microstructure and consistent performance during the fine grinding process.

Traditional steel balls are susceptible to chemical attack, thus resulting in iron contamination on the ore processed. Our ceramic media offer costs savings through improved process efficiency.
