

Low Pressure Die Casting

Rojan is pleased to present a newly developed material, Aluminium Titanate for the molten aluminium industry.

We manufacture our own Aluminium Titanate, material using iso-pressing technology. They have the following properties:

- excellent thermal shock resistance
- good corrosion resistance
- insulating properties
- very low wettability by non-ferrous melts

We can make the following products to convey and dose molten metal melts:

- Riser stalks
- Dosing tubes
- Sprue bushes
- Plugs
- Spouts

We can also supply ceramic filters to suit the process.
