## Rammed Pre-formed Furnace Liners

**Rojan** specialises in manufacturing rammed pre-formed furnace liners to suit the molten metals industry.

Our liners, made of Silica, are ideal for the cast iron industry.

They replace in-situ rammed linings which are health hazardous, labour intensive, expensive and they enhance the melt lives by 20% to 50% due to the higher density (2.25 g/cm<sup>3</sup> as compared to in-situ rammed liners of 2.1g/cm<sup>3</sup>).

The sizes we have available are:

- 750 kg
- 1,000 kg
- 1,500 kg
- 2,000 kg

We hold stock and can make to your requirements.
