

Tru-Trac Roller for Tracking & Aligning

Tru-Trac Rollers is a leader in providing solutions to problems experienced with **tracking and aligning of conveyor belts**.

The rollers employ a unique and highly effective tracking action which does not damage the belt and kicks in immediately the belt begins to track off line. This is achieved without the use of costly and temperamental electronic sensors.

The roller work equally well with both uni-directional and shuttle conveyors. They are used for tracking the return and load-carrying sides, from slow belts all the way through to high-speed, high-load belts.

Tru-Trac Rollers are so simple and robust, you can expect your repair and maintenance costs to be a fraction of what they were with alternative systems.

We provide 2 types of rollers:

- Flat Return Rollers
- Trough Trackers

They are both used for the alignment of the return side of the conveyor belt and are available in 170 diameter rolls.

The belt sizes available are:

- 600
- 750
- 900
- 1050
- 1200
- 1350
- 1500
- 1650
- 1800

Non standard trackers can be made to the customer's requirements.
