

Wear Patch Materials

Rojan offers 2 types of wear patch materials:

- Wear Patch Easy 3773 - 7 kg kit
- Wear Patch Easy Fast FC2 - 3kg kit

They are a 2-component system which is simple to use, high wear resistant and easily installed horizontally, vertically or overhead.

They are epoxy bonded hard compounds with a short cure time that can be effectively used for lining structural components and for repairs. Prematurely worn surfaces of system components can be repaired rapidly, easily and with a minimum of downtime.

Where curing time to service is not an issue, Wear Patch Easy sets in 24 hours (10mm thick @ 20°C).

Where time is of the essence, then Wear Patch Easy Fast sets in 3 hours (10mm thick @ 20°C).

They both offer a broad spectrum of service against abrasion, corrosion and chemical attack on various equipment including:

- Pumps
- Impellers
- Agitators
- Screws
- Hoppers
- Fans
- Elbows
- Chutes & Bins
- Slurry Boxes
- Screens
- Crusher Overflows
- Reclaimer Buckets
- Trommel Shells
- Baffle Boxes
